Abstract: Article (PKM) is motivated by the existence of the Randhlatunnasyi’in Islamic Boarding School Foundation which aims to provide a concrete understanding of the concept of muamalah and its implementation in Islamic Financial Institutions (LKS) so that the students of the Randhlatunnasyi’in Islamic Boarding School Foundation can apply it in a growing economic world. This research approach uses a service learning approach, which is an approach that combines academic learning objectives, interpersonal skills and contribution to society. This SL approach is very useful for students to test their understanding of the concepts or theories that have been learned. The results of this PKM are, first, the students of the Randhlatunnasyi’in Islamic Boarding School Foundation understand more about the concept of muamalah and its implementation in Islamic Financial Institutions (LKS). Second, the students of the Randhlatunnasyi’in Islamic Boarding School Foundation can apply the concept of muamalah contracts in their daily lives.

Keywords: ELiteracy, Randhlatunnasyi’in, Sharia Banking Agreement

Introduction

Community service (PKM) is one of the three elements of the Tri Dharma of Higher Education, namely education, research and community service, this activity prioritizes real activities carried out by lecturers and students, so that their presence in the community can provide benefits, especially community members who are in the PKM location. The main objective of community service (PKM) is to bring educational institutions closer to the community, so that higher education institutions can assist the community in the fields of education, outreach, development of human resources and community knowledge and welfare of the economy.

The target of this Community Service activity (PKM) is the managers of scientific journals in the City of Palangka Raya as well as the academic community. So that we need programs/activities related to journal managers who carry out journal management through the open journal system (OJS).¹ So that this activity is carried out to develop the resources and

knowledge of journal managers in managing scientific journals in a more professional manner and using technology and to be able to maximize the scientific journal's accreditation both nationally and internationally.

To realize this, academics participating in Community Service (PKM) Faculty of Islamic Economics and Business, Palangka Raya State Islamic Institute will carry out several work programs that are deemed appropriate and useful for journal managers and academics by conducting community service with training management of national and international accredited journals by presenting professional sources in their fields, because managing accredited scientific journals must be well organized, controlled and the publishing process can be monitored. The many processes in the process of publishing scientific journal publications are one way to disseminate research results to the scientific community. The scientific journal publication process usually consists of several stages, namely: writing scientific articles, submitting scientific articles, reviewing scientific articles, revising scientific articles, preparing scientific articles for publication, publication of scientific articles. This is in order to improve the quality of journals in Indonesia.

This is of course the various stages of the process that must be carried out by the journal editor. The process starts from reviewing scientific articles with the stages of evaluating articles in terms of relevance, originality, quality of writing, accuracy of writing methods, consistency, contribution to science, then the stages of rejection or acceptance without/major/minor revisions. After receiving a request for improvement to the author or revision of a scientific article by the author, either in terms of feedback from reviewers or related to the style of the enclosure. After the correction from the author, according to the editor's request, the next step is preparation for the publication of scientific journal articles. This is the process of publishing scientific journals or the correspondence process of scientific journals which are in accordance with the procedures required by the accreditation of scientific journals that must be fulfilled by journal managers so that the journal they manage can be accredited nationally or internationally.

Accredited national journals are scientific journals that meet national journal standards and are accredited by the Ministry of Research, Technology and Higher Education with accredited results with the appropriate validity period. National Journal Accredited by Permen PAN and RB No. 17 of 2013 for promotions/academic rankings with a maximum value of 25 Ranks 1 and 2 according to Minister of Research, Technology and Higher Education No. 9 of 2018. If the Ministry of Research, Technology and Higher Education does not issue accreditation for a re-accreditation application, then the results of the accreditation of the previous scientific journal will remain valid. Kemdikbudristek already has the SINTA database. This database displays journals that have been accredited through ARJUNA (National Journal Accreditation) whose results are sorted into Sinta 1 to Sinta 6 based on the accreditation score obtained.

So that this is a mandatory requirement to become an accredited journal but there are often several problems experienced by journal managers, including the following: Lack of understanding of journal managers regarding indexation of national and international journals, Lack of activities oriented towards increasing the ability of journal managers, Lack of journals accredited nationally and internationally. This makes the servants to be moved to carry out professional journal management training for scientific journal accreditation by carrying out scientific journal training activities. This is in order to improve the quality of journals in

Method

In this service, researchers used training, observation, discussion and interview methods. This method will produce more real data in the community regarding journal management issues. More concretely the method used is the service learning method. Service-learning is a method that integrates academic activities into community empowerment with the aim of being able to reflect on what has been implemented in the community itself. Community service with the service learning approach method begins with the preparation stage, such as observing and interviewing several universities that have journals. At the service stage, the community will be given action, then the final stage, namely reflection, aims to find out how far the changes have been after the action is taken. In general, the stages in the service learning method are as follows:

**Figure 1. Stage Service Learning**

Result and Discussion

Community Service Activities Training on Management of Nationally accredited Journals throughout the City of Palangka Raya was held at the Campoeng cafe opposite the city of Palangka Raya. TOT activities have been carried out well starting from the preparation stage, the service stage to the reflection stage.

**Preparation stage**

Before carrying out activities, observations are needed to be able to determine effective and efficient methods in providing Nationally accredited Journal Management Training throughout the City of Palangka Raya. Observations were made in several journal managers in the city of Palangka Raya. The characteristics and conditions of the area from the results of observations are that there are still many journal managers who lack understanding of journal managers regarding indexation of national and international journals, lack of activities oriented towards increasing the ability of journal managers, lack of journals that are nationally and internationally recognized.

---

Internationally accredited

Seeing from the results of these observations, it was decided that the most effective and efficient way of providing Palangka Raya City-wide National Accredited Journal Management Training for Management of scientific journals in the city of Palangka Raya that had not been accredited.

The steps taken by the service are by planning with stages:
1. Preparation of training materials and analysis of the needs of the training participants
2. Identification of mentors or resource persons from management circles of international standard journals or Scopus Q1, Mr. Muhamad Mustaqim, Chief Editor of Junal Qijs, (Scopus ID: 57207244848) IAIN Kudus.
3. Communicate with journal managers
4. Hold meetings with partners regarding event schedules and identification of training locations

Service Stage

The Training for Management of National Accredited Journals throughout the City of Palangka Raya is carried out by providing information on tips and tricks in managing scientific journals that are nationally accredited and accredited with international reputation.

This training activity is carried out by a service team consisting of service teams and committees and related agencies. The training is carried out in two stages, in order to get maximum results. The form of this training activity is to provide assistance and guidance on how to manage the management of scientific journals after the training activities are carried out, there will be a mentoring process for the training participants. The mentoring process is in the form of journal indexation assistance services.

Furthermore, the servants explained several indicators of the success of the solutions offered in this community service activity: 1. Increased understanding of journal managers on how to manage journals, especially related to national and international indexing 2. Management of journals 3. Increase motivation of journal managers to improve the quality of the journals they manage. Greater emphasis on the importance and stewardship of these scientific journals, as well as records of community service activities carried out by devotees.

Figure 2. Registration of Phase 2 Training Participants

Figure 3. Participant representatives from Poltekkes
The implementation of training activities is carried out in a blended learning manner, namely through presentation of material, discussions and assignments. During the training session, participants will receive material delivered by the resource person. Whereas in assignment sessions, journal managers are expected to be able to immediately improve the journals they manage based on input from resource persons during the material session. Here’s the documentation:

**Reflection Stage**

After completing the service phase or by conducting training activities. The servants will take the next step, namely observation. Observations were made during the training process in the form of deficiencies, or obstacles faced by participants in understanding the training material provided. Observations were also made regarding the response or activity of the
participants in participating in the training provided. This servant entered in the reflection stage.

The reflection\textsuperscript{10} stage aims to find out how far the goals have been achieved from the activities of the Palangka Raya City-wide National Accredited Journal Management Training that have been carried out. The method used to determine the change in attitude experienced by the amil before and after being given the Palangka Raya City-wide National Accredited Journal Management Training by taking action is by:
1. To find out the success of the program, activity participants are asked questions related to their understanding of managing journals, and get prizes for those who can answer
2. Participants receive materials related to journal management and some other special materials
3. After the training process, later the participants will still be accompanied by the implementation team so that the journals managed are at least indexed at SINTA

An indicator of the success of this training is the increased understanding of participants regarding the management of scientific journals. Based on interviews with several journal management training participants, it was found that all participants considered that the material provided was very useful for them as scientific journal managers. Participants realize that journal managers really need materials related to how to manage journals properly and correctly, so that their journals can be accredited nationally (SINTA).

Conclusion

Through this community service activity, namely Training on Management of National Accredited Journals throughout the City of Palangka Raya which is a form of community service (PKM) is to bring educational institutions closer to the community, so that universities can assist the community in the fields of education, counseling, human resource development and public knowledge, especially academics who are engaged in journal management.

Based on the results of the training participants' responses, it can be concluded that the scientific journal management training that was tried was very useful in improving the quality of scientific journal management in the City of Palangka Raya. This of course will have a direct positive impact on increasing or accrediting the scientific journal. Not only that, based on the responses of training participants and mentoring, it can be concluded that improving the quality of scientific journal management is one of the main components that greatly affects the quality of published scientific journals. Managers of scientific journals that are not equipped with professional scientific journal management skills certainly will not be able to carry out good journal managerial processes.
